

ABSTRACT OF THE DISCLOSURE

1 A dispensing system for use on a liquid container such as a bottle or the like for  
dispensing the liquid contents from the bottle. The outlet opening of the container is  
closed by a throat plug assembly having a valve positioned therein which is open when  
5 the container is mounted in a dispensing fixture which is closed when the container is  
not mounted on the dispensing system. The throat plug assembly also includes a  
specifically shaped valve which is opened slightly when the container is being stored or  
transported to vent vapor pressure from within the container should the same be  
necessary.
